Indirect Stakeholders

Some people may be affected by a system without directly using it. These people are known as *indirect stakeholders*. In what key roles will individuals be affected by the system but will not directly interact with it (e.g., for a law enforcement database: citizens, bystanders, lawyers)?

Generate a list of 3-5 indirect stakeholders. For each indirect stakeholder role, note at least one concern specific to that role. You may refer back to these roles throughout the project.
